This building is two stories high and is structured around a pole that is situated in the centre. This learning centre is a good place to relax and study in peace but is also a comfortable place to watch performances or assemblies. There is a lot of natural light permitted in this building so this is more environmentally friendly.

View From Top

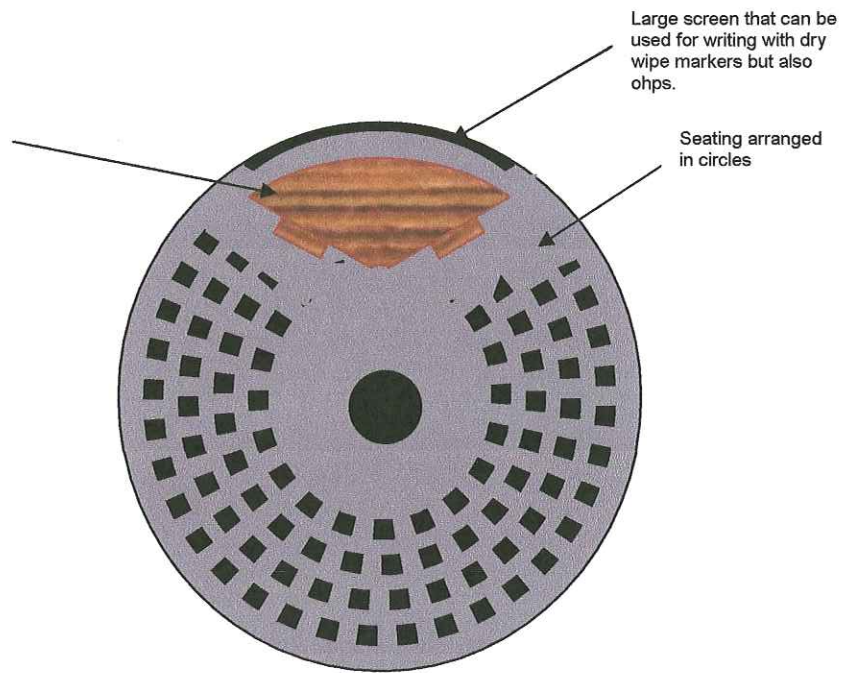

This building is circular and part of the roof is made from glass to allow natural light in. This would reduce electricity bills because lights would not be needed as often. There is a pole that is in the centre that creates a cheaper stable structure. Stairs would spiral around this pole to leave space for the gallery/study area and auditorium below.

Ground Floor

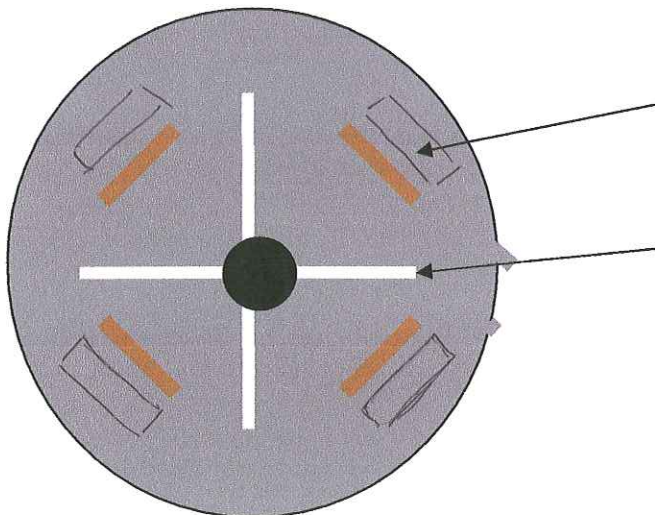

This room is good for drama performances, assemblies or even staff meetings. It is practical for every day use.

All chairs are removable for convenience

Stage area

Seating arranged in circles

Viewing benches

Gallery / display walls

Floor 1

This space can be used as a quiet study area to admire and reflect on other people's achievements. This could help students achieve high levels
